

HIMSS23 Europe Presents Interoperability Solutions

HIMSS23 European Health Conference & Exhibition will stand out for exploring the technology trends and pinpointing the recent innovations that can be used to relieve the burden on healthcare systems.

Experts will deep dive into several core areas including HIEs and interoperability, exploring how interoperability can transform health solutions around the globe. Experts will be presenting how data use and exchange can improve healthcare; increasing healthcare efficiency, mitigating physician burnout and improving patient outcomes.

Interoperability is the ability of different information systems, devices and applications to exchange and make use of data in a coordinated manner.

This information exchange can happen within and across healthcare organisations, as well as across regional and national boundaries. As the healthcare industry forges ahead with data sharing, the ability of health systems to share critical patient data within and across hospitals enables more effective care and optimises the health of populations.

HIMSS Interoperability Showcase is a unique opportunity for organisations to demonstrate to attendees the power of interoperability in tackling current healthcare challenges.

The showcase will be a great opportunity to experience real-time interoperability transactions with real-world scenarios.
