## Over \$4.3B Pledged by G7 in COVID-19 Fight, More Funds Needed

---

G7 leaders have collectively pledged over \$4.3 billion to the [ACT Accelerator](#) partnership to develop and distribute effective tests, treatments and vaccines globally.

The commitment was made during the Virtual G7 leaders meeting on 19 February 2021, taking the overall amount of the investment to \$10.3 billion. The Access to COVID-19 Tools (ACT) Accelerator comprises four pillars: diagnostics, therapeutics, vaccines and health system strengthening. In total, it needs \$38.1 billion to fully fund its work in 2021, and with the latest pledge the financing gap has been reduced to \$ 22.9 billion.

According to the [joint statement](#), G7 leaders committed to “accelerate global vaccine development and deployment; work with industry to increase manufacturing capacity, including through voluntary licensing; improve information sharing, such as on sequencing new variants; and, promote transparent and responsible practices, and vaccine confidence”.

The \$4.3 billion come from the U.S., Germany, the European Commission, Japan and Canada. Specifically, the countries made the following contributions:

**The U.S.** announced a total of \$4 billion in contributions to Gavi, including an initial contribution of \$2 billion approved by Congress in December 2020 and a further \$2 billion through 2021 and 2022, of which the first \$500 million will be made available when existing donor pledges are fulfilled and initial doses are delivered to the recipient countries.

**Germany** committed €1.5 billion with contributions to all pillars and partners of the ACT Accelerator.

**The European Commission's** contribution for the COVAX Advance Market Commitment stood at €300 million (\$363 million).

**Japan** allocated \$79 million for the COVAX Advance Market Commitment and UNITAID.

**Canada's** pledge accounted for \$59 million (CAD 75 million) to the ACT Accelerator.

Additional €200 million (\$242 million) were provided in loan guarantees by the European Investment Bank.

In turn, the UK committed to share its vaccine surplus with low- and middle-income countries as previously did Canada, France, Norway and the European Union.

The ACT Accelerator is a framework for collaboration between existing organisation, and its aim is to accelerate the development, production and equitable access to COVID-19 tests, treatments and vaccines. It was launched by the WHO, European Commission, France and The Bill & Melinda Gates Foundation in April 2020. Through the initiative, the global community strives to ensure delivery of more than 2 billion doses of vaccine; medical oxygen; millions of treatment doses; and over 900 million diagnostic tests.
